SUMMARY

Agentic AI engineer specializing in autonomous multi-agent coding systems and production SaaS platforms. Architected **KaiSchool** — a 25-module multi-tenant School Management System — using **OpenCode** for autonomous development and **OpenClaw** for multi-agent orchestration, deploying a team of 20+ AI agents working in parallel. Built **KaiBot**, an LLM-powered conversational CRM with Stripe billing and WhatsApp integration. Deep expertise in AI-first development workflows, multi-agent system design, and shipping production SaaS from zero to users. Enterprise infrastructure background at HP with strong automation, monitoring, and root cause analysis experience.

CORE SKILLS

Agentic AI: OpenCode, OpenClaw, Multi-Agent Orchestration, Autonomous Coding, AI-First Development, Prompt Engineering, LLM Workflow Design, Agent Persona Systems

Frontend: React.js, Next.js 14, TypeScript, TailwindCSS, shadcn/ui, Framer Motion, Recharts, react-hook-form, Zod

Backend: NestJS 11, Node.js, FastAPI, Python, Prisma 7, REST APIs, PostgreSQL, Redis, BullMQ

AI & SaaS: LLM Integration (OpenAI, Anthropic, DeepSeek), Multi-tenant Architecture, Stripe Billing, Conversational AI, CRM Automation, RAG, WhatsApp Business API

Infrastructure: Docker, AWS (EC2, S3, RDS), Vercel, Railway, Cloudflare, CI/CD, Nginx, Linux Administration

EXPERIENCE

Senior Technical Support Engineer

HP Inc | Apr 2025 – Present | Bengaluru, India

- Built internal monitoring dashboards and Python automation tooling for enterprise infrastructure, reducing incident triage time by 40% and enabling proactive issue detection across 200+ enterprise deployments.
- Developed log analysis pipelines and RCA automation scripts processing 50K+ daily log events, improving root cause identification precision by 35%.
- Architected technical playbooks and runbook automation framework adopted across 3 global support teams, cutting onboarding time for new engineers by 35%.
- Led cross-functional incident bridges for mission-critical enterprise escalations, coordinating between engineering, DevOps, and account management with 95% successful closure rates.

Technical Support Engineer II

HP Inc | Jul 2024 – Apr 2025 | Bengaluru, India

- Engineered automation workflows leveraging Python and internal APIs, increasing First Contact Resolution by 25% for priority enterprise accounts handling \$2M+ annual contracts.
- Built internal SLA tracking and predictive escalation tooling using SQL and Python data pipelines, reducing missed SLA targets by 40% across the team.
- Mentored 6 junior engineers on debugging methodology, infrastructure troubleshooting, Linux systems, and scripting — improving team-wide SLA performance by 20%.
- Reduced average resolution time by 30% through workflow optimization, template standardization, and automated diagnostic tooling.

Technical Support Engineer I

HP Inc | Dec 2022 – Jul 2024 | Bengaluru, India

- Developed automation scripts for log pattern detection and anomaly flagging, improving RCA precision by 18% across 1,000+ monthly support cases.
- Resolved complex commercial support escalations across Linux, Windows, and cloud environments with a 92% first-attempt resolution rate.

- Created monitoring alerts and operational dashboards for proactive incident detection, reducing mean time to detection by 25%.

Web3 Full-Stack Developer

Myriad (Remote) | Jul 2022 – Dec 2022

- Built React-based DApp UI with Web3.js wallet integration, reducing rendering latency by 35% through code splitting and optimized state management.
- Implemented Solidity smart contract integration for marketplace features, connecting on-chain logic with off-chain UI flows.

PROJECTS

KaiSchool — Multi-Tenant School Management SaaS

Private Beta | Built with OpenCode + OpenClaw

- Architected and built end-to-end using **OpenCode** for autonomous coding and **OpenClaw** for multi-agent orchestration — deploying a team of 20+ specialized AI agents working in parallel across backend, frontend, QA, DevOps, and design.
- 25+ integrated modules: Student & Teacher Management, Fees & Payments, Attendance, Exams, Timetable, Homework, Notices, Transport, Academic Years, and more — all with role-based access control and subdomain-based multi-tenant isolation.
- Full-stack architecture: **Next.js 14** (App Router) with shadcn/ui component library, **NestJS 11** with Prisma 7 ORM, PostgreSQL with row-level security, Redis caching with BullMQ job queues, Docker containerization, deployed on Vercel (frontend) and Railway (backend) with Cloudflare.
- Designed and implemented a 6-phase autonomous development pipeline: Triage → Plan → Parallel Implementation → QA & Testing → Review → Delivery — all orchestrated through AI agents with zero human intervention in the coding loop.

KaiBot — AI-Powered Conversational CRM

Live: [kaibot.app](#)

- Shipped production multi-tenant SaaS for LLM-powered customer engagement and CRM automation.
- WhatsApp-based lead capture with AI-driven conversation flows, automated responses, and intelligent customer routing.
- Integrated Stripe subscription billing with tenant-aware plan management, usage-based pricing, and automated invoicing.
- Stack: Next.js, FastAPI, PostgreSQL, Redis, Docker, Stripe Connect, AWS (EC2, S3, RDS), OpenAI & Anthropic APIs.

EDUCATION

B.Tech — Computer Science Engineering | MIT-WPU, Pune

Coursework: Data Structures, Algorithms, Operating Systems, Computer Networks, Database Systems, Web Technologies
